

- **Conservative**

Department offers different types of modern fillings for restoration of cavities and has required equipments for the same . In endodontics we don't only offer root canal treatment using conventional methods and instruments but are also equipped with modern apex locators & radio-visiography equipments, this helps in faster treatment with less number of visits for the patients .The teaching staff of the department also upgrades its knowledge regularly.

Primary goal of Department of Conservative Dentistry & Endodontics is to restore the teeth to full function & appearance in an aesthetically pleasing manner with as little loss of healthy tooth structure as possible. The treatment provided include various fillings, root canal treatment, surgical endodontics, endodontic implants, bleaching, & management of traumatized teeth.
