

- **Periodontology**

Periodontology as rightly said is the hub of dentistry around which the dentistry revolves .as it is a known fact that building cannot stand tall without a good foundation so does teeth require a strong supporting structure to hold them tight.

To maintain the supporting structures in a healthy condition different treatment procedures like scaling, root planning, polishing are carried out routinely.

To treat unhealthy ,periodontium ,extensive periodontal procedure like curettage givectomy ,flap surgery mucogingival surgeries osseous regenerative surgeries are done .In addition to this department also plays role in patient counselling for various oral hygiene methods ,periodic recalls ,diet counselling ,ill effects of tobacco ,panmasala beetal nut chewing.
